Section I Embryology 1

Steven L. Goudy and Sanjay R. Parikh

Chapter 1 Embryology of the Ear 3
Theodore R. McRackan and Steven L. Goudy

Chapter 2 Embryology of the Lip and Palate 11
Noel Jabbour and Steven L. Goudy

Chapter 3 Embryology of the Neck 17
Christopher T. Wooten

Chapter 4 Embryology of the Nose and Paranasal Sinuses 29
Frank W. Virgin, Jr.

Chapter 5 Embryology of the Face 33
Tara Ramachandra and Steven L. Goudy

Section II Otology 41

Steven L. Goudy, David R. White, and Sanjay R. Parikh

Chapter 6 Assessment of Pediatric Hearing 43
Dale A. Tylor

Chapter 7 Assessment of Pediatric Balance 53
Sharon L. Cushing

Chapter 8 Pediatric Tinnitus 67
Marc Bennett
Chapter 9  Congenital Inner and Middle Ear Anomalies
George B. Wanna and Stanley Pelosi  77

Chapter 10  Microtia and Atresia
Sivakumar Chinnadurai  83

Chapter 11  Sensorineural Hearing Loss
Henry Ou  91

Chapter 12  Nonsurgical Hearing Rehabilitation
Joshua R. Mitchell and Steven L. Goudy  103

Chapter 13  Surgical Hearing Rehabilitation
David L. Horn  109

Chapter 14  Auditory Neuropathy Spectrum Disorder
Daniel Q. Sun and Margaret L. Skinner  119

Chapter 15  Eustachian Tube Dysfunction
Brian Ho, Jessica van Beek-King, and George F. Harris, IV  129

Chapter 16  Acute Otitis Media
Travis D. Reeves and Christopher M. Discolo  137

Chapter 17  Otitis Media with Effusion
George Sim and Shyan Vijayasekaran  143

Chapter 18  Complications of Otitis Media
Allison M. Dobbie  149

Chapter 19  Cholesteatoma
David L. Horn  157

Chapter 20  Disease of the External Ear
M. Taylor Fordham and Christopher M. Discolo  165

Chapter 21  Injuries of the Auricle and External Auditory Canal
Douglas R. Sidell and Daniel I. Choo  175

Chapter 22  Otologic Tumors
Pamela A. Mudd and Ken Kazahaya  187
Contents

Chapter 23  The Facial Nerve  
David J. Crockett and Jeremy D. Meier

Section III  Rhinology  
Emily F. Boss, Soham Roy, and Sanjay R. Parikh

Chapter 24  Nasal Physiology  
Kelley M. Dodson and Adrienne L. Childers

Chapter 25  Rhinosinusitis: Definitions and Diagnosis  
Julie L. Wei

Chapter 26  Acute Rhinosinusitis  
Timothy P. McEvoy and Kris R. Jatana

Chapter 27  Chronic Rhinosinusitis  
Scott C. Manning

Chapter 28  Allergic Rhinitis  
Jonathan Liang, David F. Smith, and Sandra Y. Lin

Chapter 29  Cystic Fibrosis and Other Systemic Disorders  
Dylan K. Chan and Sanjay R. Parikh

Chapter 30  Complications of Rhinosinusitis  
Jiovani M. Visaya and Eli Grunstein

Chapter 31  Nasal Obstruction  
Jonathan R. Mark and Craig S. Derkay

Chapter 32  Nasal Foreign Bodies  
Nitin Patel and Rahul K. Shah

Chapter 33  Epistaxis  
Elton Lambert and Soham Roy

Chapter 34  Rhinologic and Skull Base Tumors  
Randall A. Bly and Sanjay R. Parikh

Section IV  Laryngology and Bronchoesophagology  
Soham Roy, David R. White, and Sanjay R. Parikh

Chapter 35  Laryngeal Physiology  
Lauren A. Kilpatrick and Gresham T. Richter
Chapter 36  Evaluation of the Larynx  331
*David J. Crockett and Jeremy D. Meier*

Chapter 37  Congenital Abnormalities of the Larynx  337
*Steven M. Andreoli and David R. White*

Chapter 38  Laryngeal Infections  345
*Jeffrey Cheng and Steve E. Sobol*

Chapter 39  Vocal Fold Immobility  359
*Derek J. Rogers and Christopher J. Hartnick*

Chapter 40  Acquired Vocal Fold Lesions  369
*Clarice Clemmens and Karen B. Zur*

Chapter 41  Gastroesophageal and Laryngopharyngeal Reflux Disease  377
*Bianca Siegel and Lee P. Smith*

Chapter 42  Subglottic Stenosis  383
*Karthik Balakrishnan, Douglas R. Sidell and Michael J. Rutter*

Chapter 43  Aerodigestive Foreign Bodies  393
*Tiffany Raynor*

Chapter 44  Dysphagia  403
*Deepak Mehta*

Chapter 45  Congenital Tracheal Anomalies  411
*Fred M. Baik and Sanjay R. Parikh*

**Section V**  **Head and Neck Surgery**  419
*Paul R. Krakovitz, Carlton J. Zdanski, and Sanjay R. Parikh*

Chapter 46  Examination and Classification of Neck Masses  421
*Anne F. Hseu and Prashant S. Malhotra*

Chapter 47  Branchial Cleft Anomalies  433
*Evan J. Propst and Vito Forte*

Chapter 48  Congenital Neck Masses  441
*Jeyanthi Kulasegarah and John Russell*
CONTENTS

Chapter 49  Cervical Adenitis and Neck Space Infections  449
Jason A. Brant and Mark D. Rizzi

Chapter 50  Pharyngitis  465
Matthew G. Yantis and Harold Pine

Chapter 51  Evaluation of Pediatric Sleep  479
Neal Jackson and Anita Jeyakumar

Chapter 52  Management of Obstructive Sleep Apnea  489
Lawrence M. Simon and Stacey L. Ishman

Chapter 53  Craniofacial Surgery  501
Christopher M. Discolo

Chapter 54  Cleft Lip and Palate  513
Krishna G. Patel

Chapter 55  Velopharyngeal Insufficiency  525
Lorien Paulson

Chapter 56  Salivary Glands and Sialorrhea  535
Austin S. Rose and John P. Dahl

Chapter 57  Sialadenitis  545
John P. Dahl and Carlton J. Zdanski

Chapter 58  Salivary Gland Tumors  555
John P. Dahl and Carlton J. Zdanski

Chapter 59  Pediatric Thyroid Disorders  563
Kyra Osborne and Paul R. Krakovitz

Chapter 60  Head and Neck Malignancies  571
Karthik Rajasekaran, Timothy M. Haffey and Paul R. Krakovitz

Chapter 61  Hemangiomas  577
Lisa M. Buckmiller

Chapter 62  Vascular Malformations  589
Lisa M. Buckmiller
Chapter 63  EXIT (Ex utero intrapartum treatment)  
Procedure  
Anna Hang and Carlton J. Zdanski

Section VI  
Evidence and Guidelines in Pediatric Otolaryngology  
Emily F. Boss and Sanjay R. Parikh

Chapter 64  Evidence and Guidelines: Tympanostomy Tubes  
David E. Tunkel

Chapter 65  Evidence and Guidelines: Tonsillectomy  
Oshri Wasserzug and Ron B. Mitchell

Chapter 66  Evidence and Guidelines: Surgery for Pediatric Rhinosinusitis  
Eleni Benson and Emily F. Boss

Section VII  
Common Syndromes  
Carlton J. Zdanski and Sanjay R. Parikh

Chapter 67  Craniofacial Syndromes  
Amelia Drake

Chapter 68  Hearing Loss Syndromes  
Laura H. Swibel Rosenthal and Anahita Jalilvand

Chapter 69  Neck Syndromes  
Grace G. Kim and Carlton J. Zdanski

Index
**FOREWORD**

Pediatric Otolaryngology-Head and Neck Surgery: A Clinical Reference Guide is a valuable new educational resource for residents and fellows in training who desire a comprehensive and concise source of information with respect to the discipline of pediatric otolaryngology. The guide also fills a necessary niche in terms of providing an informative text designed for the rapidly expanding group of physician extenders—physician assistants, nurses, and nurse practitioners—providing pediatric otolaryngologic care.

The guide’s 69 chapters are divided into 7 sections. Four sections cover the major subspecialty fields of otology, rhinology, laryngology, and bronchoesophagology, and head and neck surgery. Two sections—embryology and common syndromes—are critical to the pediatric otolaryngology focus of the text. The section on Evidence-Based Guidelines in Pediatric Otolaryngology is unique and reflects the current emphasis on clinical outcomes throughout Otolaryngology-Head and Neck Surgery.

The editor, Dr. Sanjay Parikh, and his section editors—Drs. Emily Boss, Steven Goudy, Paul Krakovitz, Soham Roy, David White, and Carlton Zdanski—are among the up and coming leaders in the field of pediatric otolaryngology. The authors of many of the chapters are similarly of the most recent decade of pediatric otolaryngologists, representing over 30 well-respected institutions. As such, they bring a fresh perspective to longstanding topics, introducing innovative diagnostic techniques and novel therapeutic interventions.

The guide’s overall concept of enlisting young authors with senior mentorship, coupled with a textbook of manageable size, provides for an excellent contemporary review to guide current and future generations of otolaryngologists in the care of infants, children, and adolescents.

CHAPTER 64
Evidence and Guidelines: Tympanostomy Tubes
David E. Tunkel

Introduction ............................................................. 618
Indications for Surgery ............................................. 618
Risks and Sequelae of Tympanostomy Tubes .......... 624
Follow-Up Issues .................................................. 624
References .............................................................. 625
INTRODUCTION

• Tympanostomy tube insertion is the most common ambulatory surgical procedure in children in the U.S.
• By age 3 years almost 7% of children will have tympanostomy tubes
• 667,000 children <15 yrs old undergo tympanostomy tube placement yearly
• Most common indications for tubes are otitis media with effusion and recurrent acute otitis media (most evidence and guidelines are for these diagnoses)
• Less common indications for tympanostomy tubes include complications of otitis media, structural changes of the tympanic membranes (eg, atelectasis), and barotrauma—limited knowledge exists to make evidence-based recommendations for these indications
• Although tympanostomy tube placement is common, controversies and differences of opinion remain about:
  1. Appropriate indications for tympanostomy tubes
  2. Possible overuse of tubes for recurrent acute otitis media or middle ear effusions of short duration
  3. Appropriate perioperative care and long-term follow-up

Indications for Surgery

Acute Otitis Media

• Tympanostomy tubes do not have a role in treatment of uncomplicated isolated acute otitis media
• Tympanostomy tubes can be placed at the time of myringotomy for children with complications of acute otitis media (facial nerve paralysis, mastoiditis, lateral sinus thrombosis, etc). Although no RCTs support this recommendation, surgical drainage of middle ear space is useful adjunct to medical therapy, and allows culture to direct medical therapy

Recurrent Acute Otitis Media

• Usually defined as 3 episodes in 6 months, or 4 episodes of otitis media occurring over a year with 1 episode within 6 months of presentation
• Prior to 2013 few if any evidence-based guidelines recommended tympanostomy tubes for recurrent acute otitis media (includes U.S., Japan, Italy, others)
• AAP Clinical Practice Guideline on Acute Otitis Media published March 2013 contained an action statement that says clinicians
may offer tympanostomy tubes for recurrent acute otitis media\(^1\)
(Considered an “option” as supporting literature is scant)

- Cochrane review included only 2 studies which met inclusion criteria, and found tympanostomy tubes reduced the number of acute otitis media episodes by 1.5 in the first 6 months after surgery; long-term benefits of tubes have not been demonstrated\(^2\)
- One systematic review found insufficient evidence that tympanostomy tubes had a beneficial effect for recurrent acute otitis media\(^3\)
- Another systematic review found tympanostomy tube efficacy for reduction of recurrent acute otitis media similar to antibiotic prophylaxis, with the reduction of 1 episode of acute otitis media in the 6 months following surgery. Estimated number needed to treat to prevent 1 episode of acute otitis media was between 2 and 5\(^4\)
- Large quality-of-life improvements have been demonstrated after placement of tympanostomy tubes, but these studies usually included mixed populations of children with acute otitis media, middle ear effusions, or both

**AAOHNs Clinical Practice Guideline on Tympanostomy Tubes** (Table 64–1) published July 2013 makes several recommendations about the use of tympanostomy tubes for recurrent acute otitis media:\(^5\)

1. Clinicians should NOT perform tympanostomy tube insertion in children with a history of recurrent acute otitis media who do not have a middle ear effusion in at least 1 ear at the time of evaluation:
   a. The children in the control groups of antibiotic prophylaxis trials for prevention of acute otitis media had no middle ear effusions on entry to the trial and had very favorable natural history, with most children experiencing less than 2 infections in the study period
   b. Children with a history of recurrent acute otitis media and a normal examination at presentation may be “overdiagnosed”

2. Clinicians SHOULD offer tympanostomy tube insertion in children with history of recurrent acute otitis media who have middle ear effusion in 1 or both ears at the time of evaluation
   a. Trials that did not exclude children with middle ear effusion suggest a modest reduction in number of episodes of acute otitis media after tympanostomy tubes
   b. Although reduction of episodes of acute otitis media is the primary goal, tympanostomy tubes may reduce pain during episodes of acute otitis media and can allow treatment of otorrhea with ototopical antibiotics
<table>
<thead>
<tr>
<th>Topic</th>
<th>Action Statement</th>
<th>Directive</th>
</tr>
</thead>
<tbody>
<tr>
<td>OME of short duration</td>
<td>Clinicians <strong>should not perform</strong> tympanostomy tube insertion in children with a single episode of OME of less than 3 months duration, from the date of onset (if known) or from the date of diagnosis (if onset is unknown)</td>
<td>Recommendation against</td>
</tr>
<tr>
<td>Hearing testing</td>
<td>Clinicians <strong>should</strong> obtain an age-appropriate hearing test if OME persists for 3 months or longer OR prior to surgery when a child becomes a candidate for tympanostomy tube insertion</td>
<td>Recommendation</td>
</tr>
<tr>
<td>Chronic bilateral OME with hearing difficulty</td>
<td>Clinicians <strong>should offer</strong> bilateral tympanostomy tube insertion to children with bilateral OME for 3 months or longer AND documented hearing difficulties</td>
<td>Recommendation</td>
</tr>
<tr>
<td>Chronic OME with symptoms</td>
<td>Clinicians <strong>may perform</strong> tympanostomy tube insertion in children with unilateral or bilateral OME for 3 months or longer AND symptoms that are likely attributable to OME that include, but are not limited to, balance problems, poor school performance, behavioral problems, ear discomfort, or reduced quality of life</td>
<td>Option</td>
</tr>
<tr>
<td>Surveillance of chronic OME</td>
<td>Clinicians <strong>should</strong> re-evaluate, at 3–6 month intervals, children with chronic OME who do not receive tympanostomy tubes, until the effusion is no longer present, significant hearing loss is detected, or structural abnormalities of the tympanic membrane or middle ear are suspected</td>
<td>Recommendation</td>
</tr>
<tr>
<td>Recurrent AOM without MEE</td>
<td>Clinicians <strong>should not perform</strong> tympanostomy tube insertion in children with recurrent acute otitis media who do not have middle ear effusion in either ear at the time of assessment for tube candidacy</td>
<td>Recommendation against</td>
</tr>
<tr>
<td>Recurrent AOM with MEE</td>
<td>Clinicians should offer bilateral tympanostomy tube insertion in children with recurrent AOM who have unilateral or bilateral MEE at the time of assessment for tube candidacy</td>
<td>Recommendation</td>
</tr>
<tr>
<td>------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>------------------</td>
</tr>
<tr>
<td>At-risk children</td>
<td>Clinicians should determine if a child with recurrent AOM or with OME of any duration is at increased risk for speech, language, or learning problems from otitis media because of baseline sensory, physical, cognitive, or behavioral factors</td>
<td>Recommendation</td>
</tr>
<tr>
<td>Tympanostomy tubes and at-risk children</td>
<td>Clinicians may perform tympanostomy tube insertion in at-risk children with unilateral or bilateral OME that is unlikely to resolve quickly as reflected by a type B tympanogram or persistence of effusion for 3 months or longer</td>
<td>Option</td>
</tr>
<tr>
<td>Perioperative education</td>
<td>In the perioperative period, clinicians should educate caregivers of children with tympanostomy tubes regarding the expected duration of tube function, recommended follow-up schedule, and detection of complications</td>
<td>Recommendation</td>
</tr>
<tr>
<td>Acute tympanostomy tube otorrhea</td>
<td>Clinicians should prescribe topical antibiotic ear drops only, without oral antibiotics, for children with uncomplicated acute tympanostomy tube otorrhea</td>
<td>Strong recommendation</td>
</tr>
<tr>
<td>Water precautions</td>
<td>Clinicians should not encourage routine prophylactic water precautions for children with tympanostomy tubes</td>
<td>Recommendation against</td>
</tr>
